picborate

Official Whitepaper

v1.0

Let’s create spunky images together!

INTRODUCTION

We live in a world where most of us have a camera on our phone and enjoy whipping it out to document the moment. Whether it's a selfie with friends or an evening meal with family, or a photo shoot with a professional photographer, photographs are an integral part of our lives now.

But with all the snapping away and all the social networks around, the question of consent is inevitable.

Whether it's a picture of you taken by an average Joe, or a famous photographer while a collaborative photoshoot, your consent should have been given before the picture ends up online publicly!

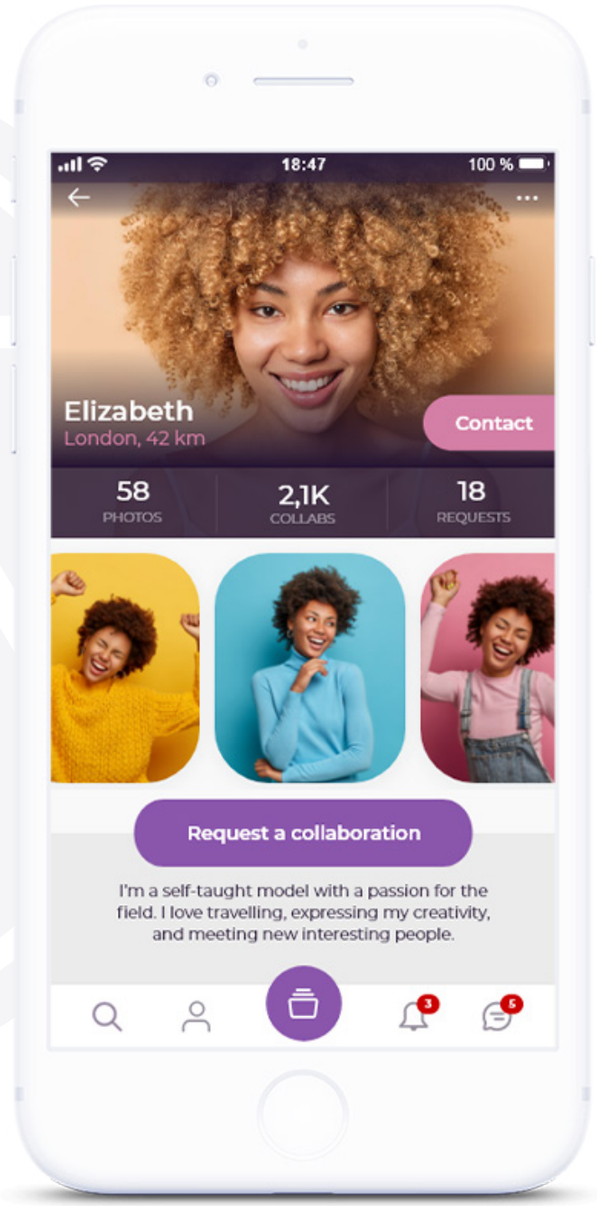
PICBORATE

Picborate is the first platform specially designed for collaborative photoshoots between photographers and models.

» Photographers give their consent by uploading the pictures

» Models give their consent after viewing uploaded pictures

Until both side authorize the publication, the pictures are private between them.



TOKEN

PICBO is an utility token in Cronos Chain and it is the official currency of the Picborate platform.

Name:	**Picborate Token**
Ticker:	**PICBO**
Blockchain:	**Cronos Chain**
